

**REMARKS**

Claims 10-18 remain pending in the present application. Applicants note with appreciation the allowance of claims 10-14 and 16-18.

Claim 15 stands rejected under 35 U.S.C. § 102(b) as being anticipated by United States Patent No. 4,023,075 to Reuter. Applicants have amended claim 15 to recite that "the analyzer circuit is configured to reactivate the device when a frequency pulse transmitted over the power supply line is present." Support for this amendment is found at least in page 3, line 18, to page 4, line 5, of the specification. Since Reuter does not teach the subject matter of this amendment to claim 15, it does not anticipate claim 15. Accordingly, withdrawal of the rejection of claim 15 is respectfully requested.

It is respectfully submitted that the subject matter of the present application is new, non-obvious, and useful. Prompt consideration and allowance of the application are respectfully requested.

Respectfully submitted,

KENYON & KENYON
